Professional Summary

Full-Stack Software Engineer with over 3.5 years of experience architecting enterprise-grade web applications and Agentic AI workflows. Expert in building scalable Next.js and React.js frontends integrated with autonomous RAG architectures using LangGraph and LangChain. Successfully delivered high-performance solutions, including a centralized robotics platform managing 200+ bots and privacy-first pipelines using quantized LLMs at United Health.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, Go

Frontend: Next.js, React.js, Tailwind CSS, React Native

Backend: Node.js, Express.js, Django, FastAPI, Rust, Go (net/http), RESTful API

AI/ML: Agentic AI, LLMs, RAG, LangChain, LangGraph, NLP, TensorFlow, PyTorch

Cloud: AWS (ECS, ECR, S3, EC2, Lambda), Docker, Kubernetes, Cloud Infrastructures

Databases: SQL, PostgreSQL, MySQL, Redis, GraphQL, MongoDB, Supabase, NeonDB, DrizzleORM

CI/CD: Git, Jenkins, Ansible, Bitbucket

Tools: JUnit, Postman, Selenium, JIRA

Professional Experience

Software Developer

Aug 2023 – Present

Client: United Health Group

- Architected an Agentic AI workflow using LangGraph and Python to manage cyclic state and multi-turn reasoning, reducing manual process handling by 47% across autonomous agents executing complex multi-step tasks.
- Engineered a privacy-first Agentic RAG pipeline using FastAPI to host quantized Llama 3 and Mistral models, ensuring 100% on-premise processing and zero data leakage across 40+ proprietary document workflows daily.
- Connected custom AI agents to APIs and SQL databases using LangChain, automating 30 cross-platform workflows and saving 12 hours/week in manual orchestration with simple natural language commands.
- Developed high-performance UIs using React, TypeScript, and Tailwind CSS within a Micro Frontend (MFE) architecture, utilizing RTK Query for efficient state management and data fetching across multiple product teams.
- Launched Bot Center, a centralized Next.js and React.js based robotics platform that automated the management of 200+ bots, significantly reducing operational overhead with real-time health monitoring.
- Applied RESTful APIs and SOA patterns across 45+ endpoints, integrating with Next.js and React using GraphQL and Apollo for efficient real-time data handling.

Project Engineer

Sep 2020 – Sep 2021

Wipro Ltd

- Modernized cloud infrastructure on AWS using EC2, S3, and VPC, driving a 70% boost in operational efficiency and supporting high availability for mission-critical software.
- Constructed RESTful APIs using FastAPI and Go, reducing system integration time by 50% and improving overall reliability through structured microservices patterns.
- Designed responsive front-end applications using React, JavaScript, HTML, and CSS, enhancing user engagement by 40% and increasing overall user satisfaction scores by 20%.
- Optimized complex database systems involving MySQL, MongoDB, and Redis, achieving a 40% decrease in query execution time and improving real-time data access.
- Implemented rigorous unit testing and quality assurance using JUnit and Selenium, ensuring a stable codebase and reducing production regressions.

Education

Wichita State University

Wichita, KS

Master's in Computer Science

Aug 2021 – Jul 2023

SCSVMV University

Kanchipuram, India

Bachelor's in Electronics and Communication

Jul 2016 – Jul 2020
